Hi,

We are hiring 2 gen ai interns for this position asap. Its a first come first serve basis as we prefer to hire somebody by end of weekend. If you know llms, this should be pretty easy.

Also this position is 4-6 months and it converts into a full time if you perform good. Please submit an assignment in internshala as well as google response form. Both are must.

1) Use any llm to produce new content like text generation , image/video synthesis.
2) After that you would train it on this 17 page pdf - https://pgcag.files.wordpress.com/2010/01/48lawsofpower.pdf
3) Host it on web app. It should be a working web app, the one which we will use to input questions and it should spit out answers.Please test webapp in incognito before sending us. We will be asking a lot of questions from your webapp, based on the book.
4) Make a loom video of inputting questions and getting answers. Ask these 3 questions - "Can you give me an example from history where the enemy was crushed totally from the book?"
   "What's the point of making myself less accessible?"
   "Can you tell me the story of Queen Elizabeth I from this 48 laws of power book?"
5) After all this fill out the google response form please with your details, url of webapp, your github code, loom video. https://forms.gle/xG5br4K2HqfjehtZA

Note - please dont ask us for a deadline, the sooner you submit, the better the odds of getting in. Historically, only 3-5% candidates are able to do this test well. So if you are attempting it, good chances you will get in. Prefer not to ask questions in the chat, as after sending this test, we are flooded with messages in internshala chat and hard to spot, where the question is genuine. Please try to do your best, in case you have a question, message us, but there is a chance we wont be able to answer. And we may hire somebody by that time.
